Subject: Sole supplier statement to the supply of a PET collimator for the E-class VECTor^{6}CT^{SD} at Clínica Universidad de Navarra

To whom it may concern,

Superior system performance is achieved through patented focused multi-pinhole cylindrical collimators. A wide range of collimators is available to meet ultra-high resolution and ultra-sensitive imaging requirements. The wide selection of collimators makes VECTor highly versatile, tailoring your imaging requirements to meet your expectations and beyond.
It is a pleasure for MILabs to continue supporting your imaging needs by providing one dedicated and patented Ultra-High-Resolution Rat and Mouse (HE-UHR-RM) collimator for your existing MILabs E-class VECTor^{6}CT^{SD} with system number 80868. MILabs collimators can only be installed on the systems designed, manufactured, and delivered by MILabs and therefore MILabs is the sole supplier in this case.

Yours sincerely,

Behdad Pouran, PhD
Sales and Business Development Manager
